Customer Service Fantastic !!!!

Reviewed in the United States on March 28, 2026

Color: Satin Nickel Size: Deadbolt (Single) Pattern Name: Camelot **Verified Purchase**

the lock has been working great for five years, easy to use and install.

The customer service is amazing, we lost the key that comes with the digital lock and are selling the home, the buyer wanted the key. We called the Customer support line and they sent a new key at no cost and had it here the next day. I don't write a lot of reviews but this company rocks in both CS and a great product. Yea!!!!!!

Quality Lock With Many Features

Reviewed in the United States on October 12, 2023

Color: Satin Nickel Size: Deadbolt (Single) Pattern Name: Camelot **Verified Purchase**

The instructions in the box plus an installation video that popped up on my phone when I scanned a barcode in the user manual made this a rather easy installation process. I replaced a basic mechanical Schlage deadbolt lock, so the holes were already there.

I like the many features such as assigning temporary access codes, auto-locking after a specified time,

being able to control and configure everything via the free Schlage Home app and various other things. Now our house-sitter won't lock herself out of the house again when we are away on vacation.

It has a BHMA Grade 1 rating, according to the specifications sheet, which is considered the best of the best in locks.

You can create from 4-8 digit access codes and store up to 100 different codes via the app.

I also like that it is WiFi compatible right out of the box and it doesn't require an aftermarket hub to connect it through. Mine quickly found and connected directly to my home network router. It only works with 2.4GHz, not 5GHz. Not a big deal with me, I have both. It is Android and iPhone compatible, works with Alexa, Google Assist and my Ring security camera app.

So far, I haven't found anything that I do not like about this Schlage Encode. After slightly more than six months since I installed this it shows 39% battery life in the app with WiFi enabled the entire time, so it drops about 10% per month. It looks nice, too. I will update my review if something changes.

Here are some hopefully helpful hints to pass on after reading some other reviews where people were having trouble.

1. If the battery life on yours is short, make sure that the lock bolt does not bind. There should be no extra friction when you manually operate the lock via the lever, whether you do that with the door open or closed.
2. If you cannot see the keypad numbers at night, press the Home button in the bottom left corner of the keypad to wake it up and then you can enter the access code.

Great smart lock. Better than Kevo 2nd Gen

Reviewed in the United States on March 1, 2020

Color: Matte Black Size: Deadbolt (Single) Pattern Name: Century **Verified Purchase**

This Schlage Decode lock is great! I owned the Kevo 2nd Gen previous to this but the Kevo was problematic and did not have as many nice features like this. I'm going to compare the 2 so you know the pros and cons of both.

Schlage: Con: You have to get it rekeyed at Lowe's or HD if you want it rekeyed. Or you have to get a special kit and then you can rekey. Not as simple as Kwikset's simple rekey technology. Standing on the outside, I open my door inward and my door swings to the right. When first installed, the thumbturn seemed to not fully turn to thrust the deadbolt fully into the lock strike-plate. It turns out, you have to turn on the phone app and then enter the preprogrammed lock combination on the lock panel. Then a note will appear on the phone app to ask to proceed. After telling the App to proceed, the Schlage door lock will open and close and then the thumbturn will function properly.

Pro: LOTS. Lock is quiet and smooth in it's operation of thrusting and retracting the deadbolt. WiFi remote ability included. It pairs with my WiFi router easily since the door location has great signal. I can operate this lock from anywhere in the world using the phone app as long as my phone has internet capability. To operate this lock at the lock itself, locking is simply pushing the lock icon button on the lock's numbered panel. You can also assign multiple access digit codes on the lock number panel for different people. As a result, everyone can choose his own number code to operate the lock and the App will show who opened and closed the lock based on which codes were used. Takes only a few seconds to enter the number code to open the door and kids love doing this.

You can also program it to lock automatically from 30 secs to 4 minutes after it's been unlocked. I set it to 4 minutes in case I forget to lock my door; it automatically locks in 4 minutes. 30 seconds is too short because I sometimes need to get something from my garage or patio and I don't want the lock to automatically lock so quickly. Four minutes is plenty of time to go out to do a short errand around

the house.

It also comes with a real backup key which I hide but have access externally in case the battery runs out or the electronics malfunction. Some of the smart locks don't have backup mechanical key function and this in my mind is dangerous. Sure, you can put a 9 volt battery to power the lock and it will solve the low internal battery problem but what if the electronics are defective? And who stores a 9 volt battery outside just in case the lock's battery goes too low? Speaking of batteries, the Schlage App shows the actual battery strength. So far, I've used the lock heavily for 1 week and the battery percentage went down 1% so a set of 4 batteries should last 6 months to 1 year. Also, to change the battery, the cover just pulls up and the battery is quickly and easily changed.

I really like this Schlage lock.

Kevo 2nd Gen - Pro: Can be re-keyed easily. Yes, you can re-key it to use your old keys by just turning the key while in the lock, pushing in a flat metal tool, removing old key, inserting new key, and turning lock. Simple, fast, and easy.

Con: Noisier than Schlage when it mechanically moves the deadbolt.

Con: Kevo App doesn't tell what the battery strength is, unlike the Schlage. To change the battery, 3 screws must be removed and the faceplate must be removed and then the battery can be changed. Too big of a hassle when you have to do this monthly.

Must use a smart Phone to unlock Kevo and be nearby since it only uses bluetooth. You have to be less than 20 ft to remotely open/lock the Kevo. To use wifi, you have to buy a Wifi adapter costing about \$100 extra.

No code access. There is no number panel on lock so anyone without a phone cannot open the door without a key. As a result, my 10 year old could never unlock the door. To open, the Kevo app must be opened on the phone and you can remotely open the lock if you are less than 20 ft away since it uses bluetooth. Or if the app is opened in the background, you can touch the "rose face-plate" of the Kevo and it unlocks. However, sometimes this doesn't work and I would have to use the app to remotely open it or even just use the key. The Kevo is not as reliable as the Schlage and there is no number panel to key directly to the Kevo in case remote operation doesn't work..

So just spend a little more money and get a Schlage Decode. It provides all the features I want in a smart lock and is reliable in it's operation. Also, make sure the deadbolt travels into the strikeplate easily, without resistance. Otherwise, it's requires more energy (shortens battery life) and lock may jam.

Great Upgrade for my home

Reviewed in the United States on February 25, 2026

Color: Matte Black Size: Deadbolt (Single) Pattern Name: Century **Verified Purchase**

The smart model's keyless entry is a total game-changer—just punch in a code or use the app, and you're in. No more juggling groceries while digging for keys! The app is super easy to use, letting you change codes, unlock remotely, and check activity in seconds. I do wish the batteries lasted a bit longer, but the battery-level indicator is a lifesaver—it warns you well in advance, so I've never been locked out like I was with my old lock.

Honestly, I'd recommend this lock to anyone. It's better than anything I've found in local stores, and installation is a breeze thanks to the QR code instructions.

Total Trash

Reviewed in the United States on April 8, 2019

Color: Satin Nickel Size: Deadbolt (Single) Pattern Name: Century **Verified Purchase**

Got the lock and installed it. The directions are straight forward. Locked worked great the first day.

Some things to note.

- The hole where the bolt goes into the door was too small for this lock, so I had to make it a little bigger even though I had just removed another Schlage lock from the hole.
- The screw holes on the striker plate for the frame side of the door did not line up with existing holes. They send you two plates but neither worked so I had to leave my old plate there. Couldn't drill new holes because the old ones were too close.
- During installation of the lock itself you put the number pad in place from the outside and then attach a plate to the number pad from the inside. Don't over tighten the screws on the plate. Tighten them just enough to keep the key pad from moving around. If you over tighten you will find the screws to attach the inside part of the lock are too short.

Now for the problem I really have. On day two my app, I am using the Schlage app, says I have no locks. I can unlock and lock the door by hand and I get notices on my phone, but I cannot use the app to lock or unlock the door or add new pass codes. Good thing I wasn't depending on the phone app to let anyone in the house. At this point I will never be able to rely on the lock for that issue. I attempted to reconnect the phone app to the lock, but the lock just flashes a red light and beeps.

Right now, I honestly would not recommend this lock to anyone who will ever rely on using the phone app to open the door. If you just want a push button deadbolt then it appears to work for that. In my opinion having that luxury is certainly not worth \$250.

Little more information on steps I took to rectify this problem. Other than calling the Schlage folks for help. Oh, I did that too, but they will only help you during their business hours and that happens to be when I am at work myself. Also, don't try their website troubleshooting because that just runs you in circles.

- Deleted and reinstalled the app. Could not connect.
- While following the directions on the app I randomly pushed the button on the inside of the battery pack. The phone actually paired with the lock but the lock would not connect to my WiFi so I could not proceed.
- Factory reset the lock and repeated the steps of connecting including pushing the button on the battery compartment. Connected to the phone but no Wifi.
- Removed and replaced the battery and reset the lock. Still no Wifi.
- Provided my user information to my son who downloaded the app on his Android. He followed the directions on his app and everything worked great.

Even though the app shows I have no lock paired with my phone I still get messages when someone locks and unlocks the door. Strange things. Since the lock and app are completely unreliable I will be sending it back.

Oh, and why does the app need to have access to my location? That is not information that is relevant to me operating a lock.

****Update**** The lock magically reappeared in the app after being gone for two days. I guess they updated the app to fix the WiFi problem. I will continue to use the lock and app up to the point where I am out of time to return the lock. At that point if everything is still working I will come back and update my rating. For now I'm keeping it at 1 star.

****Update II**** I have been using the lock since it started working again. I have not had issues since. My wife actually purchased a second one and we now have one on the front and back door. They both have worked mostly flawlessly since the app was updated.

****Update III**** This thing is the biggest piece of crap. I have had this lock installed for about 8 months now. I have the issues listed above. The lock sucks down batteries is constantly losing connection with my family's phones and now it has completely stopped working. Oh and be ready to reset the lock and reconnect it EVERY time you have to change batteries.

Update: lock died after 5 yrs. If you have \$200 to spend on a digital lock and the convenience is worth it to you go for it. For me, a \$200 lock should last a long time. I had 2 of these locks. One failed just inside the warranty window and Schlage replaced it. The other died in 5 years and Schlage will do nothing.

***UPDATE* Works great once it works.**

Reviewed in the United States on December 9, 2024

Updates at bottom

I'm leaving my original review, but will update at the bottom...

I needed something that would allow me to remotely let my kids in, since keys can get lost or stolen and codes can be forgotten. But the code option is nice just in case. This has all those options! However, not all of them work.

The key pad is dead upon installation. I've checked several times for what I may be missing, but nothing has resolved the issue. Is it supposed to light up? It does not. No response to anything.

The physical installation wasn't too bad. Had a couple of do-overs, but things fell into place. Probably the most confusing part was getting the tiny screws through the internal part and into the plate to secure it to the door. If you have a well-lit area you can look through the hole and see the place you need to aim for.

The app works... okay. The wifi is very short-ranged and weak. My router is about 10 feet away from it, if that, but on a different level. Less than 1 bar, and constantly not connecting. Took about 10 tries to get the firmware updated due to connectivity issues. I have a mesh router, but another review indicated it won't work, though I have not tried it yet. I think they have one you can buy for \$70. You know... spend MORE money on an already overpriced lock. The app also has issues knowing the status of the lock. Most likely that's the connection problem causing that.

Unfortunately I bought this 4 months ago, so I'm SOL. Schlage will charge you, apparently, for tech support. No clue on warranty though. I will attempt that soon. If Schlage can get me up and running without sneaky up-selling or anything, I will revise this review. But, as of now, I do not recommend this.

Update #1 12/9/24

After posting this review, I did call tech support. Took over an hour to get through. During the beginning of the call, they text you a link to complete some information to submit. After an hour, I spoke with someone who sent something on to a support person, who was supposed to email me within 48 hours. That would have been by this past Wednesday. It is now Sunday and nothing yet (it's the weekend, so I didn't expect anything past Friday, which was still 48 hours after the 48 hours), not even in my Spam folder. I will be emailing them later with the number they gave me for reference.

Update #2 12/21/24

I never received a call or email from a technician, but by the end of last week, I received an email stating that a replacement lock was being sent to me with tracking numbers. It took about a week to get here (which was expected), arriving yesterday. This morning, I decided to swap out the old and replace with the new. The process is easier for me this time since everything else was already installed. Just needed to swap the back and the front. You definitely want to test it out first to make sure the keypad is working. The cable has a little release on it to get it to disconnect, since you will need to connect it before putting the cable through the door. Load the batteries properly and insert the battery tray into the back of the lock. After a brief moment, you should see lights on the keypad and hear beeps. Disconnect and install with the instructions.

I bumped it from 1 star to 4 stars currently. Once it works, it's great! Still not thrilled with the wifi range strength on it, but so far it has connected. I know the defect in the first one was probably affecting the wifi connection. Funny that I had to connect using my guest wifi connection, since that is the weakest of all. But it works. I have a mesh router that I've not used yet, so I may try that soon to see if it helps. Schlage did say it will work, but only using 2.4 ghz not 5 ghz.

Best Smart Lock I've used

Reviewed in the United States on April 2, 2026

Color: Matte Black Size: Deadbolt (Single) Pattern Name: Century **Verified Purchase**

I like these locks so much I bought one for my garage door too. The Schlage Encode is by far the best smartlock I have owned. The batteries last a very long time, often 6-8 months depending on how much useage the door has. I set up routines through my Alexa app to lock everything at once which is very convenient. It is also compatable with my Ring security system allowing me to add users and lock codes into one app instead of both. This lock was simple to install and easy to set up with the Schlage app.

Easy to use for AirBNB Renters

Reviewed in the United States on December 17, 2023

Color: Satin Nickel Size: Deadbolt (Single) Pattern Name: Camelot **Verified Purchase**

We had a \$600 very sophisticated LOCKLY installed for our AirBNB rental for little less than a year. What a nightmare. The system had a hub and it would go off the internet on its own, you had to be there to sync it with your phone and power cycle it constantly. Then on top of it it was not intuitive and it took an hour of instructions so they could open it and close it and use it. The best thing we did was throw it away. It was the most stressful for us being long distance property managers but was a total nightmare for our renters. The next best thing we did was to buy this Schlage Encode Lock. First of all Schlage customer service was excellent. We called them before we purchased and they had the right answers. First of all if you are not near your rental property, and you have a trusted handyman as we do, they instructed us on how he could put the app on his phone with my husband's email and passwords. Our handyman installed the Schlage he said it was a snap, downloading the app with the snap, he synced the lock to his app. He got out of the app. my husband then went into the app on his phone and done. Now if there is any problem our handyman can go over, hubby gets out of app, he gets back in and syncs the lock and etc.

Since the October 30th 2023 install our AirBNB have been there now for almost 2 months, with new ones coming in early January. I just got off the phone with our renters and the lock is easy to use there's been no issues whatsoever. It is very intuitive easy easy. Not once has it gone offline, there has been one Schlage system update which would have thrown our old LOCKLY system off and us to be personally there to sync with our phone. This one no problem.

The only negative that our renter brought to our attention this morning is that the batteries need to be replaced often. He said every 3 weeks. We need to look into this, but that said, we left a whole drawer of batteries not anticipating it, but thinking good and wise to do so. It was wise. That said very easy to replace the batteries and the renters didn't even call us he just handled it. The LOCKLY system was set up so that you need a small tiny Phillips screwdriver and directions to figure out how to replace the batteries.

All in all this has been an answer to a prayer on the many issues we've had with the previous lock. Hope this helps out others with this review whether you rent or using it personally.

Several plusses and minuses with this lock

Reviewed in the United States on April 25, 2019

Color: Aged Bronze Size: Deadbolt (Single) Pattern Name: Camelot **Verified Purchase**

My purchase of a Schlage Encode electronic front door lock and the matching FE285 handle and latch set (purchased separately) yielded several lessons in how to select such devices while avoiding most of the problems.

Upon receipt of the lock, I had Lowes re-key it to match my other Schlage house locks (a free service at my Lowes). But note: have this done BEFORE you install the lock! Otherwise, a locksmith must come to

your location and will charge accordingly.

I have installed my lock and set it up. It will provide access to my home if I require 911 services (I live alone). My medical alert company has a temporary access code for the lock, which it will provide only to 911 responders. And if I am unable to delete that code immediately after responders access my home, that can be done remotely by family members or friends who have downloaded, installed, and set up the Schlage Home app on a compatible cell phone. That prevents responders from abusing the code to burglarize the home later. There is the added reassurance that any use of an access code can generate an immediate alarm on the Schlage Home app.

I had to contact Schlage's excellent customer service by phone to complete the installation and programming of the lock. The Schlage web site has a contact phone number, which is answered by real humans.

Some important considerations:

1. This still isn't a mature market with the ideal combination of design and functional features. It's likely you won't get all the aspects of appearance and function that you want in one model. And with Encode being a fairly new model, for which the rollout does not seem to have included a complete set of installation and programming instructions, you are likely to be calling Schlage's helpful customer support staff for assistance.

2. The Encode Camelot lock does not appear to be available as a set with a matching Camelot latch set FE285. Such combinations are available with some other locks, along with discounts for ordering both sets of hardware together.

3. Encode is similar to Schlage's other electronic locks (Sense, Touch, Connect), but don't be misled by this similarity. The setup is deceptively similar, but the programming instructions for those other products don't work with Encode, nor are the instructions intuitive. It's challenging to locate programming instructions for the Encode on Schlage's web site. On the FAQs section of the Schlage Home app, Encode doesn't even appear as a selection option for programming instructions.

4. Encode is the only Schlage model (that I know of) that can connect to your WiFi network without the use of an external hub or WiFi adapter. That's why I purchased it. Advantage: one less device and wireless connection to go wrong. Disadvantages: WiFi transceivers use a fair amount of power, shortening the battery life. And you can't set up the WiFi connection unless you download and install the free Schlage Home app, or other compatible app, onto a compatible cell phone, and set up the connection using the app.

5. The instructions are insufficient. My standardized door cutouts for the latch and lock matched the enclosed template, but neither the latch nor the lock was centered within their respective holes as they should have been. I had to remove material from these holes on the sides closest to the edge of the door to make room for their installations. This, despite the Encode replacing Schlage's similar, manual latch set and lock on the same door. The biggest omission from the Quick Start Guide: WiFi is not even mentioned, let alone explained.

6. The Schlage Home app's user interface is minimalist—too much so, for me.

7. Encode is available only in a limited set of finishes. For example, there was not an antique brass finish to match the Schlage interior hardware in my home. I went with the Camelot version with the Aged Bronze finish, hoping for sort of a match. This was a mistake. Aged Bronze not only is much redder than the yellowish Antique Brass—it is so dark that one can't tell from just a few feet away whether the lock is engaged or not. Like a black hole, it simply doesn't reflect enough light to see any detail. If I were to start the selection process again, I would go with one of the modern Encode Century designs with very visible features. They will fit any decor as well as, or better than, the option I chose.

8. The Encode keypad and I still are not getting along. As with cell phone keypads, this one's sensitivity seems to vary from one key press to the next. And when one is entering, say, the six-digit programming code (necessary for adding or deleting user codes), there is no indication of where one is in the process. If you accidentally touch a key twice in rapid succession by mistake, for example, there will be no clue that this has happened. In such situations, you're likely to fumble for a while and finally start over (expletives deleted). You must press the exact center of a number for it to respond. Easier said than done, during a winter blast or soaking downpour, and when the keypad is somewhere around your navel's level. I would much prefer a push-button keypad with tactile feedback whenever a key is successfully pressed, similar to a mechanical computer keyboard. Some other Schlage models have push buttons, but those models will not directly connect to a WiFi network.

9. Some electronic locks accept an access code, then require the user to turn the deadbolt manually. Encode automatically moves the deadbolt without your involvement. Slick. But there is a cost. If your door is not exactly and correctly positioned, the deadbolt will rub against the strike and will not travel the required distance for the lock to be fully engaged. This reduces security, and a deadbolt rubbing against the strike plate is likely to draw more power, further reducing battery life and possibly damaging the tiny bolt motor. In the best of all possible worlds, all doors are positioned perfectly forever. In reality, even doors that are perfectly positioned at the outset are very likely to shift and rub over time, due to expansion, contraction, and warping of materials, or shifting of the house. For that reason, I prefer mechanical operation of the deadbolt. But Schlage models with that feature do not connect to WiFi directly.

So, there you have it. Look at lock options carefully and choose the compromise that works best for you.

Missing screws

This lock was sent with no screws to attach the interior electronic portion to the mounting plate. While I love the product, having it missing parts straight out of the box is unacceptable.
