August smart lock problems

Question

Was wondering if anyone else has experienced this problem. I used August smart locks on my first two listings and they work great. Guests book and automatically get a message and a door code.

I used the same kind of locks on my third listing and started it in December. The automation part that links with Airbnb has never worked for this listing. I've talked to both August and Airbnb support many times. I have factory reset the locks a few times and uninstalled and reinstalled the apps a few times.

I'm not sure what else I can do. It's a huge pain to manually create and send a code to new guests each time. One thing August told me was that they had some problem with their integration around that time in December due to Airbnb changing something in their API. I don't know how true that is but supposedly that issue has been resolved by now.

Thanks for reading.

I have four locks and they all are buggy in regards to auto setting codes and emailing for check-in.

Great concept, poor execution, non-existent quality control, poor user experience. Especially considering the cost.

Please do and sell some to me.

What brand are you using? The shitty thing is I'm using these same locks on the other two listings and they work great. So I spent probably a thousand bucks on the same locks for the new listing and I can do everything manually but that last automated bit just doesn't work on this listing for whatever reason.

I have Yale locks august connect. It works sometimes, but it needs to work every time. Without fail.

And while we are critiquing... I'm not paying for the manual setting remotely, I want it set and forget. This task is begging for automation and it's a straight forward concept. Oh, no subscription please.

I've noticed that when I sync it with Airbnb it is buggy but if I set the code directly myself it seems to work...have you had any similar experience?

Also I have two keypads and it sends two separate emails with two different codes and doesn't say which code goes with each door...absolutely maddening

Same experience. Like I said above, great idea, terrible execution.

Known issues and failure points. Would only use if it's a rental and I can't change the locks myself.

I am having the same problem. I started setting up my new locks in January and none of them get codes on bookings. All my older locks work fine.

me.

We have close to a dozen of them. They are terrible and don't work. I believe them to be a completely defective product and borderline fraud that they are still selling them. I have gone back and forth for months with all level of support and they have finally offered to refund me for all of them instead of being transparent.

- temporary codes don't work 70% of the time or fail to work at all. August has acknowledged this bug but has no timeline on when it will be fixed. I believe it's a time syncing bug.
- the connections between the bridge and the smart module will permanently drop within hours. It doesn't matter how close you get them. We have tried all sorts of things. It's a critical flaw they refuse to acknowledge with no transparency around what the actual problem is. Connection will drop and the only solution is to pull out a battery and put it back in. This means: you won't get alerts about low batteries, codes will look like they have been added for guest but they won't work.
- the software is in very poor shape. You'll notice certain things have disappeared from the app like the ability to see battery percentage, that's because imo, they are trying to mask the severity of the problems.

If you have any other issues or questions I'd be happy to answer, but I would try to get your money back immediately.

Thanks for sharing your experience. I'm hesitant to try get my money back because I don't know if there are any better alternatives. I know some people use the Schlage Encode, but those have some

The software is definitely buggy though in a lot of ways and I have had a few times when codes would randomly stop working and then work again later.

Do you have any smart lock recommendations that you have had a better experience with?

Kind of surprised to see all the folks with August struggles here. I have two August locks, of differing generations and they work effortlessly all the time.

There was a brief hiccup last year that affected maybe two guests, it was blamed on an integration update, and I think it had something to do with timezones. It was easy to catch and resolve (I had to manually make pins for one guest and change the times on another), and August had it fixed within a week.

August locks work fine on my first two properties but on my third they've never worked right with Airbnb. I suspect I'd have to delete everything: my Airbnb listing, my August app, my August account, get all new locks and connects and keypads. Then maybe it'll work if I start from scratch. Not doing that though and August just shrugged it off.

That's certainly disappointing to hear, what generation are they?

joe34654 **OP** • 4y ago

Unverified

First property I used the 4th generation. Second and third properties I used the 3rd generation.
