Flawless performance still after almost 2 full years!

Reviewed in the United States on November 11, 2019

Color: Satin Nickel Size: Century Pattern Name: Z-Wave Plus **Verified Purchase**

UPDATE: My original batteries finally died!!! This lock is used at least 6 times a day, everyday, often used more than that, & has been unquestionably worth every penny! The original 4-AA batteries died after 20 months of constant use, almost 2 years!!!! I have been SO impressed I had to update this review.

This lock is amazing, I swapped my original lock set into this lock (was also Schlage, biggest reason I picked this) so I could use my original keys still, and it feels like it will last a lifetime. The display is very easy to see, even in direct sunlight, the touch pad works very well & it looks great on my door. Connection & control has been effortless, & I have not had a single connection issue between the SmartThings hub or activation through Alexa (still, after almost 2yrs). Alexa cannot unlock the lock, so no worries about someone asking her to unlock from outside, and Alexa can't activate "routines" that involve locking or unlocking the door, but will promptly lock the door when asked to & will tell you the status of the lock when asked if the door is locked. My hub is in the basement of my house & has no trouble connecting to this lock at the front of my house (main entry, 35ft away through 4 walls & a floor). The only downside to the lock is SmartThings can only control the locking/Unlocking and monitor battery life, Schlage's dedicated app is required for all other features they offer, & code programming has to be done at the door, but I wasn't interested in those features anyway & access code programming is very simple. Would I recommend this lock? Absolutely hands down!!

Review 1: Understand your lock type

Reviewed in the United States on June 26, 2021

Color: Matte Black Size: Century Pattern Name: Z-Wave Plus **Verified Purchase**

****6 mo. Update:** It's great! Battery life, 6 mo solid--multiple daily uses; still working, but noticed slight slowdown in lock rotation. As I wrote previously, this is one of the benefits of the z-wave--no wifi draining the batteries. Really convenient not having to carry extra keys, allows us to give access to house cleaners and room renter - get notifications of who's coming in. Connects to Ring perfectly for easy control.

I'll update this review after a month or so. Finished installing yesterday - relatively easy to do and setup. Working well - as expected.

I wanted to address a **major** problem with a lot of reviews on this lock (and others): many people are not doing the research they need to and are misunderstanding smartlock types and what they actually need/want. Some are mis-answering questions and dinging perfectly good locks because they are expecting it to do something it wasn't designed to do. You have to understand these options when looking at the **type** of smartlock and also how a particular brand (Schlage, Kwikset) implements that type. I'll start with lock types and then discuss Schlage's locks.

Smart Lock Types: Bluetooth, Z-Wave, Zigby, Wifi. (Start with this for primer comparison: <https://www.safety.com/z-wave/>)

Bluetooth are the cheapest locktypes and often the least expandable in terms of integration to smarthubs, automation.

Z-wave and Zigby - two different versions of the same type of transmitting technology; Z-wave operates at a lower MHz (900) that won't interfere with wifi (2.4); Zigby operates at 2.4, so it can experience some wifi bandwidth competition - for the typical home, this is not a deal-breaker. Z-wave can also transmit somewhat farther, but both can use plug-in nodes that will increase range.

NOTE 1: BOTH require a Smarthub: Ring, Wink, Smarthings (being discontinued, I hear - research it), Google, etc. These locks typically do **not** have a dedicated app, as they are integrating into your smarthub. Also, almost all of these types of locks integrate with Alexa for additional functionality. Alexa can be considered a smarthub on its own, but most often tends to be integrated into other proprietary apps and other hubs. This is, honestly, a confusing aspect of smarthomes - the market is in fierce competition, and most are choosing to "cooperate" with multiple layers of integration between hubs and apps. I don't fully understand all of it, as the market is still settling.

NOTE 2: One of the most important **other** benefits of Z-wave and Zigby is power. All smartlocks (for now) use batteries. Z-wave and Zigby offload the power drain of communication and bandwidth to the Hub, which relies on wifi and is AC powered. This allows the batteries to be mostly dedicated to minuscule radio transmission and powering the deadbolt. The batteries (usually 4 AAs) on these locks can last from 1-2 years, depending - seems like closer to a year.

Wifi - The lock communicates directly with your home wifi network: 1) allows fastest possible speeds - not really needed for a lock action; 2) allows direct app control; 3) does **not** require a smarthub; 4) large power requirements - the built-in wifi takes a lot of power - battery life is typically 2-6 months. Integration with smarthubs and Alexa is possible and common, but not required.

Schlage locks:

Connect - **two** types: Z-wave - Ring, Wink, Google, etc., does **not** work with Apple; Zigby - Amazon Cloud-cam

Encode - wifi type; battery life is challenging; connects directly with proprietary app; can connect to Ring, Alexa through sidedoor connections. If you end up connecting to smarthub, why not just get Connect type?

Sense - bluetooth; uses proprietary app; in order to connect to Apple/iOS, requires wifi adaptor - more expense. Basically, this seems targeted at people who live in the Apple Homeconnect ecosystem.

Stay away. FAR away.

Reviewed in the United States on November 3, 2025

Color: Bright Chrome Size: Century Pattern Name: Z-Wave Plus **Verified Purchase**

Absolute, utter garbage. Would intermittently pair, but not on any secure channels in zWave. I should not have expected such basic functionality from a lock company that had previously failed me (I had purchased the Wi-Fi version of this initially, but it had Wi-Fi connectivity issues and drained its batteries in one month). Even though it had a zWave 800 router within 6 feet of it, and both of those less than 25 feet from the zWave 800 base station, after hours of attempting to get it online, it refused to join to the zWave mesh.

I have experience with Kwikset locks with zWave, pairing them to Ring - they were a pain to get paired but once paired, work flawlessly. To this day - we're talking 5+ years later - they are still running strong. Schlage? Three WiFi locks, all with intermittent issues, numeric displays that were impossible to read until you start pressing buttons (which invalidates that attempt at the code), dropping off the network at critical times that I needed to unlock things to permit people into my house while I was away... what a nightmare.

Stay away from Schlage. Between this lock and their other Connect locks, I have not had one lock work properly, consistently, in the past several years.

Paired with Brinks system but does not have full functions.

Reviewed in the United States on August 27, 2024

Color: Aged Bronze Size: Camelot Pattern Name: Z-Wave Plus **Verified Purchase**

I have an alarm system that was ATT and then turned into Brinks. The door lock I had was showing its age and has been giving me issues. Use to ATT would swap them out but Brinks does not do that. Instead of buying another of the same, which I have had I think 3 over the years, I decided to branch out and try something else.

I went with this one because it better matched the shape of my door handle. The shape and color is much better. The unit itself is heavy and feels much better built than the Yale I had. The gears seem stronger with less slop. The lock also seems much stronger and though it is also much louder I don't mind. I am actually hard of hearing so the louder function and the flashing green check on the front are better for me making it easier for me to know the lock has locked. I couldn't always tell on my last one and would have to try the door. Not with this one.

As for adding to my system it was not a terrible job but I found that this lock does not give the same features as the other. Mainly I can not see who is putting their code in to unlock the door like I could with the other. This one also can not be set up to disarm the alarm when a code is entered. Neither are a huge deal but I don't see why it can't have that ability. I can unlock and lock it through the alarm app so that is really the main thing needed.

I also like that the batteries on this one has a cover that just lifts off and does not have a screw holding it. Then you can pull the battery holder out and change them. It just slides right in the top which I prefer from the front loaded one I had.

 MARTY MCCAFFERTY

Nice lock that works with my Smartthings HUB and can be controlled remotely

Reviewed in the United States on August 17, 2020

Color: Aged Bronze Size: Camelot Pattern Name: Z-Wave Plus **Verified Purchase**

I have used Schlage combination locks before, but this is my first "smart" lock. There are a few to choose from, depending on your needs. This one uses Z-wave wireless to talk to a HUB that supports Z-Wave. (Hubs centralize your smart home automation and have advanced capabilities that non HUB automation may not provide.)

I have a Samson Smarththings HUB to control my house smart activities.

The Pros:

The lock is beautiful. Very elegant and was the style I was looking for.

Schlage locks are known for the best in class security.

Uses Z-Wave and works with Smarththings hub. (Z-wave is low power so batteries last longer)

Easy to install. It simply replaced my previous deadbolt. I spent no more than 15 minutes installing.

Connected to my Smarththings HUB with no issues.

Add and remove codes remotely

You can unlock and lock the door remotely, on a schedule, or some event that your HUB handles.

You can have lights or other devices turn on or off when lock is locked or unlocked if you want (controlled by HUB).

Con:

Cost.

Instructions for connecting to Smarththings HUB are to minimal. There was conflicting methods from included instructions and online manual.

I found no documentation from Schlage or Smarththings on how to setup the lock so I can enter combination codes on the lock from the Smarththings application.

The default configuration will only allow lock and unlock from the Smarththings applications and to view the locks current status (locked or unlocked).

I knew that I should be able to manage the lock codes/combination from Smarththings. After lots of searching I found someone on YouTube that walked through the steps to setup codes. Now when someone enters a code to enter the door I am notified on my phone and the name I associated with the code is displayed, so you could know which family member, worker, etc just entered.

I would recommend this lock, I will be buying more.

Stylish modern upgrade to any front door

Reviewed in the United States on May 8, 2025

Color: Aged Bronze Size: Camelot Pattern Name: Z-Wave Plus **Verified Purchase**

I wanted a smart lock solution for our vacation home and after a lot of searching this one fit the bill. We have a major security provider and I wanted a smart lock that would integrate with their system's control module and our smart home hub. Schlage's z wave makes it very universal to communicate with multiple systems but confirm compatibility first. The second reason for this was Schlage states this deadbolt is bump resistant and it can be used with an old fashioned key. The piece of mind of using a key in the event of battery loss, frozen weather, etc. is a huge plus in my book. Another great feature is the built in alarm, so even if the main system goes down this can be a backup for the front door. My wife loved the overall look and the fit/finish is top notch and matches our home decor exactly. Installation was easy and we added secure deadbolt striker plates with 3" screws. Make sure to align everything before cutting (measure 3 times, cut/drill 1 time) and putting it is is easy. It uses standard batteries which is also a big plus. After 8 months the batteries are still going strong. The key pad looks great and once you know how to turn on the light it is easy to use in the dark. You can program in multiple codes so you can keep track of who is opening the lock.

Pros

- Looks great, heavy and good quality frame and components.
- locking mechanism is solid and operates smooth (but noisy as others have noted)
- can operate as a smart lock or a dumb lock or anything in-between (can be locked from inside with a mechanical dial)
- battery life is long, even with a month of below freezing temps the same set of batteries is going strong 8 months later
- integrates with multiple smart systems. I can geo-fence the lock to unlock when I am in the driveway, remotely lock/unlock, and control from my primary alarm system provider's app and base station
- physical keys work perfect
- lighted keypad for night, but you need to know how to turn them on
- supports multiple pins for different users, can be used with smart systems to know who is coming/going
- easy to install and setup, had it installed into a brand new door in just under an hour and

programmed in 30 min

Cons

- locking/unlocking is loud (the motor that operates the mechanism), this can be a plus if your want audio assurances but it can be jarring late at night/early in the morning (but you can use a key or the knob if you want to be quiet)
- deadbolt alignment is an absolute must, any resistance or alignment that causes rubbing or binding will make the locking/unlocking problematic, this is why we installed the heavier duty deadbolt striker plate with deadbolt channel
- z-wave is more open source, however you have to take the cover off to put the lock into paring mode which makes hacking it very hard to do without physical access to the back cover
- keypad night light isn't intuitive to use, press the Schlage logo, we mitigated this with smart light-bulbs on the porch

Overall, we are supper happy with this lock. My wife loves the look and feel, I love the security features and reliability. I highly recommend this as it can be used with keys and without smart feature just in case. It stays connected to my alarm system and smart home hubs without any issues. Even though we have an alarm system this holds the extra layer of security knowing if anyone tries to bump it or kick the door in an additional alarm will go off and notifications sent.

Clarence D. Marshall Jr.

Works great and integrates with ADT Pulse system.

Reviewed in the United States on January 14, 2021

Color: Satin Nickel Size: Camelot Pattern Name: Z-Wave Plus **Verified Purchase**

I owned a prior version of this lock, and after 3 years of use it quit working. However, I don't believe it was the lock's failure, but something wrong with my ADT system. I had connected this lock through my ADT Pulse system and was able to check the lock status and lock/unlock my front door through the ADT app as well as a Netgear tablet purchased through ADT. The ADT tablet went bezerk after about a year of daily use and started flashing randomly to different screens and not responding to touch. Soon, we woke up one day to find out front door lock locking and unlocking rapidly and had no idea if it had done that all night or not. From then on, we could no longer lock or unlock the door with the touchpad on the lock. We believe the Netgear ADT console had broken the lock by cycling it repeatedly all night long. We discovered, after calling ADT that they had discontinued the Netgear control pad and would no longer replace or repair it. To get another remote control pad required an almost \$1,500 system upgrade to their latest system! So, I completely removed the ADT Netgear control pad from the system, then purchased this door lock, a newer version of the one we had before. With the Netgear pad now out of the ADT Pulse system, we have had no problems at all, and this version works perfectly. We can still lock and unlock the door from the ADT app on our smartphones, we just don't have the control pad from ADT in our bedroom anymore.

Doesn't work very well

Reviewed in the United States on June 29, 2025

Color: Aged Bronze Size: Camelot Pattern Name: Z-Wave Plus **Verified Purchase**

We had a 15-year-old Schlage lock on our front door that stopped working last week, so I ordered this SCHLAGE BE469ZP CAM 716 unit, which costs three times more than the best-selling digital lock on Amazon, to keep things compatible and uniform. I am a pretty good DIY person with a college degree. I downloaded the manual from the Internet to read and took the old lock out and put it back in twice successfully to practice for the installation.

The unit arrived the next day without the backup key, a significant disappointment, but not a deal-breaker for me yet. The only manual was a tiny booklet (4"x4" size with 10 pages including the covers) with simplistic but clear instructions. The new unit looks well-made from the outside, but the internal parts are flimsy for an expensive lock. The installation was effortless at first, but the final part was connecting the tailpiece with the slot in the back of "the inside assembly". Something was wrong with the "thumbturn" setup, so it can only work if we turn the "inside assembly" sideways. I spent two frustrating hours on a Saturday afternoon struggling to get it to work, but couldn't. The next day, I tried again and called for support, but it was closed on Sunday. I called them again on Monday, but gave up after waiting for over 30 minutes.

It seems like Schlage is a good brand, and its locks are installed all over my neighborhood in the SF Bay Area. However, my experience with installing this lock was quite disappointing. I have to give it 1 star as a warning to other customers. I will return this worthless unit to Amazon and get a working one at Home Depot.

Very Good but if you do not require remote locking or unlocking consider others

Reviewed in the United States on November 11, 2020

Color: Satin Nickel Size: Century Pattern Name: Z-Wave Plus **Verified Purchase**

We've had this lock installed for 1 1/2 years. It is generally locked or unlocked electronically about at least 10 times per day. (Household of 7)

-Connectivity - Our Smart Things hub is about 10 feet away and we've had only 1 issue. We lost connection once which required me to pull the battery out of the lock and then everything reset itself okay. The lock will continue to work and can use existing codes without connectivity. Using the Smart Thing app allows you to easily program the lock and share codes for guests. You can also lock and unlock using the app and can lock (not unlock) using Alexa. I get an alert from Smart Things every time somebody unlocks with a code which is handy as I know who and when one of my kids returned home.

- Battery life - 6+months if your lock is aligned smoothly and rotates well. We are on our 3rd set of batteries, The 1st set went for 6 months to a year. Long enough I didn't worry about it. Our 2nd set died very quick, under a couple months since there was a period the deadbolt did not turn smoothly. You MUST make sure the lock turns smoothly, any hang up or resistance greatly affects battery life. After addressing that issue the lock works much better. However, I have had to adjust its alignment a couple times as we enter winter (and temps affect alignment) to ensure smooth operation.

- Installation - I had 1980 metal door with a smaller diameter hole for the deadbolt, so I purchased a lock hole kit from the local hardware store to enlarge the opening. That part was trickier, the rest of the installation and connecting to Smart Thing hub was pretty straightforward. As mentioned earlier, good alignment of the bolt and smooth operation is important.

Here's why I think a manually activated keyless deadbolt might be better:

-Prior to this lock we had a Schlage BE365CAM619 (still have it, just on garage door). What is really nice about the manual turn electronic locks compared to the electronically turned locks is the following:

1. Faster operation - enter code, flip bolt push door, no delay at all. The electronically turned deadbolts require about 1 second to unlock the bolt. Not a huge deal, but sometimes annoying. Especially if the door was already unlocked, then you enter the code and the you just locked it. This never happens on the manual activated one because you would enter code and flip the latch. Even if it was already unlocked you didn't just lock it.

2. Battery life much better on manually activated keyless lock.

3. Electronically activated deadbolts could jam and really reduce battery life or become unusable until fixed - On occasion some kid will enter code then push the door right away without completely waiting for the bolt to retract, that could misalign the bolt and reduce battery life significantly, Sometimes they enter the code, but it was already unlocked so they just locked it and then shove the door also misaligning the bolt. On a rare occasion, 3x in 1 1/2 years they push it hard enough that it jams the mechanism and you must enter the house a different way and realign it.

The obvious downside to the manually activated ones is that you can't lock your door from anywhere with a internet connection. On a real practical note, this means if your in bed and your wife asks if the doors are locked, you have to get out of bed and check... Now I can pull out the phone and just check.
