Schlage Encode - remotely trying to get back online

Question

For those that are managing STR remotely...app showed battery at 85% on a Saturday, and guest contacts me saying keypad not lightin up, at all. I was convinced NO WAY it was battery...but...they did change them, and it worked. So...they now can use it.

my bigger issue...i have not yet been able to get the app to connect to lock. When i go to settings, and Wi-fi settings....network and password are 'blank'...unclear if they would normally be populated. But...i cannot manually type in the network and password....well, i can, but not fixing/connecting.

Guests say wifi is working...and i even logged in to my ISP, and wifi seems to be 'on'.

Any troubleshooting thoughts/suggestions? next guest code was not created 'in time'...so it's going to be a problem for me soon.

Thx! I spent 40 min on hold with Schlage and they said I need to be there in person to re-pair with the Bluetooth.

peoridbd • 2y ago

Bummer, hope it works out for you. We ended up giving one of our local friends admin rights to our lock and she had to go in person one time to troubleshoot for us.

[deleted] • 2y ago

It only works with 2g. I had to split the band after Comcast only wanted to use 5g. That has solved the problem for me. Make a separate log in for the lock with 2g.

Thanks. Things were working great for almost a year...honestly don't recall how it was originally set up, but would be curious if i would have to do something new/different as far as freq?

Removing battery prob reset it... Get your cleaners to set it up.

Unfortunately that will never fix it. I spent hours doing everything til Michelle/Lisa (I forget) at Schlage support mentioned the 2g thing

What kind of batteries? I started using lithium brand name and no problems.

Edit... I create about 5 extra codes just in case the connection died. This let's me give a few out while I sort it out.

**Substantial-Owl-1021** [OP](#) • 2y ago Host

the super expensive lithium! in fact...the issue w/ batteries was so odd.

It was literally (battery life on app) at 99% for so many months, i thought it was not working (the life indicator)...it got down to 85%. Then dead in an instant.

great idea about the extra backup codes, appreciate it.

ONLY Duracell. Energizer and the no name brands are terrible in my experience

And smart move adding more codes when you can. Save me hassles as well

**Fit-Succotash-5564** • 2y ago

Shlage recommends Duracell. I used energizer and a couple others at first...they were awful

I hope this saves other people a ton of grief it caused me I had to call Spectrum and have them kill the 5g frequency for an hour. Turn off auto connect wifi on your phone. Connect locks using 2g wifi when 5g is temporarily off. Took me 3 weeks and 2 locks by Schlage to figure this out. The locks have a hard time with 5g initially . If anyone needs help reach out or message on here

No problem. Good luck. These locks really are the jam once they're operating smoothly :) At \$309 each they should be lol

HELP! OK, i do believe this is our issue...and wife on phone w/ Optimum, at the STR, and cannot get the lock to find the new 2g wifi....any tips /tricks?

Fit-Succotash-5564 · 2y ago

Unverified

You have to ask them to kill 5g for an hour

Substantial-Owl-1021 [OP](#) · 2y ago

 Host

They killed SmartWifi, and separated the two... Now it's more of a Schlage problem, lock not finding new 2g network (visible to phone)

Fit-Succotash-5564 · 2y ago

Do a factory reset on the lock I don't remember off hand how to do it but it's really easy

I think you have to hold that button when you take off the cover until you see it lighting up a blue and red I believe. Let me know if that helps

I've had an issue with the battery holders on two different Schlage Encode locksets - changing the batteries/moving the holder seems to fix the issue.

I've also had Schlage replace two different locks completely due to issues. I've always trusted Schlage, but now I'm looking for something different...
